

In this Video you will learn...

***End to End Scenario***

# from Watson IoT via NodeRED to Cloudbant

- Deploy Test Data Generator flow
- Hook it up to Watson IoT Platform (MQTT broker)
- Subscribe to data...
- ...and store it to Cloudbant (ApacheCouchDB NoSQL)

# Summary

- IoT data comes from IoT devices
- NodeRED can run on them as well
- Easy to simulate flow
- Straightforward to stream data to Cloudant
- Cloudant connector supports data frame from ApacheSpark

The next module covers...

***Mathematical Foundations on  
Exploratory Data Analysis***
